MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

JUNE 1936

JUL 31 1936

TEMPERATURE

Mean temperatures for June were below normal in the Northwest Territories, the northern sections of Alberta and Saskatchewan, northern and central Manitoba and throughout most of Ontario and the northwestern portion of Quebec. Elsewhere throughout Canada and Newfoundland there were generally quite moderate excesses above normal mean temperature.

Throughout the Yukon mean temperatures were generally two to six degrees above normal. On Vancouver Island, along the southern sections of the coast of the mainland and in the lower Fraser River valley in British Columbia excesses of two to four degrees were reported. Along the northern section of the coast excesses were somewhat larger, ranging from four to seven degrees. In the southern interior river valleys mean temperatures were normal to four degrees above normal.

In the Peace and Athabaska River valleys of Alberta and southward in the foothill district west of Edmonton and Calgary mean temperatures ranged from one degree below to one degree above normal while there were generally excesses of one to two degrees in the North Saskatchewan River valley and in the agricultural district about Edmonton. In the Red Deer River valley and just north of the International Boundary mean temperatures were three to seven degrees above normal but slightly lower in the South Saskatchewan River valley of Alberta where the excesses above normal were only one to five degrees.

In the North Saskatchewan River valley in Saskatchewan departures from normal mean temperatures were quite small, ranging from one degree below to two degrees above normal while throughout the agricultural region surrounding Scott and Saskatoon and southward to Swift Current and Moose Jaw there were excesses of one to three degrees. In the district about Empress and Kindersley and in the extreme southwestern corner of the province mean temperatures were four to six degrees above normal. Along the International Border from Wood Mountain to the Saskatchewan-Manitoba boundary and in eastern Saskatchewan mean temperatures were normal to two degrees above normal.

Temperatures were very nearly normal in Manitoba. Throughout the southern agricultural districts of the province mean temperatures ranged from one degree below to one degree above normal. The exception was the Red River valley where excesses above normal of one to three degrees were reported. In the northern lake region mean temperatures ranged from two degrees above to two degrees below normal.

In Patricia, Kenora, Rainy River, Thunder Bay and Cochrane districts of Ontario there were negative departures from normal mean temperature of two to four degrees and four to seven degrees in Temiskaming, Nipissing, Sudbury, and the northern section of Algoma districts. In the southern part of Algoma district and on Manitoulin Island there were deficiencies of two to three degrees. Generally throughout southern Ontario mean temperatures were normal to two degrees below normal. The exceptions were in the counties along Lakes Erie and Ontario where there were excesses of one or two degrees.

In the Ottawa and Gatineau River valleys in Quebec and northward toward James Bay mean temperatures were normal to four degrees below normal with the largest deficiencies near James Bay. In the lower, middle and upper St. Lawrence River valley and southward to the International Boundary and in the Lake St. John district mean temperatures were normal to three degrees above normal. There were excesses of three to six degrees in the Gaspé Peninsula and along the north shore of the Gulf of St. Lawrence.

Mean temperatures were above normal in all three Atlantic Provinces, the excesses being one to three degrees in New Brunswick and one to four degrees in Nova Scotia, with the largest excesses occuring immediately south of the Basin of Minas. On Prince Edward Island temperatures were three degrees above normal.

In Newfoundland mean temperatures were one to two degrees above normal in the southwestern part of the country with the excesses increasing to seven or eight degrees on the northeastern coast. At the western entrance to Hudson Strait mean temperatures were normal but one degree below normal at the eastern end. Along the west coast of Hudson Bay temperatures were practically normal in the north and one or two degrees below normal in the south.

PRECIPITATION

On Vancouver Island the June rainfall was generally twice the normal amount with the smallest excesses of about 75% occurring about Victoria. In the lower Fraser River valley precipitation was practically normal while in the Okanagan valley normal to three times the normal amount of precipitation occurred. In the Kootenay River valley available reports indicate nearly normal rainfall.

In the Peace River valley of Alberta there were excesses of 40 to 100% and about 30% in the region about Lesser Slave Lake. Reports indicate normal to 20% below normal rainfall in the Athabaska River valley. Elsewhere in Alberta precipitation was below normal for the month. In the agricultural district about Edmonton and in the North Saskatchewan River valley in Alberta there were deficiencies of 20 to 40% generally. In the Red Deer and Bow River valleys rainfall was 20 to 60% below normal and 30% generally while in the Oldman and St. Mary River valleys and eastward to Medicine Hat and the Alberta-Saskatchewan boundary deficiencies were 5 to 55% and 25% on the average.

In Saskatchewan moderate excesses of 10 to 50% and 20% on the average were reported in the agricultural district around Rosthern, Saskatoon and southward to Beechy. Excesses of 20 to 40% were reported in the Last Mountain district and in that section of the province between Broadview and Lintlaw and the Saskatchewan-Manitoba boundary. Elsewhere in Saskatchewan sub-normal precipitation was reported. In the western sections of the province from the Alberta-Saskatchewan boundary as far east as Battleford and Swift Current deficiencies ranged from 20 to 40% and were 30% on the average. South of Swift Current and Regina deficiencies were 10 to 75% and 35% on the average while in the North Saskatchewan River valley the deficiency was about 25%.

Rainfall was about 10% above normal in the district around Brandon and Portage la Prairie but elsewhere in the agricultural section of southern Manitoba there were deficiencies of 10 to 65% and 30% generally. In the district about Lake Dauphin there was an excess of about 20% and 40% in the region along the shores of the northern part of Lake Winnipeg. At Le Pas there was a deficiency of about 25%.

In northern Ontario from the Lake of the Woods to Lake Nipigon deficiencies of 20 to 75% were reported and 40% on the average. In the region between Lake Nipigon and the Ontario-Quebec boundary and southward as far as Lake Nipissing and Manitoulin Island deficiencies were generally 5 to 50% and 30% on the average although small excesses were reported locally at White River and Biscotasing. In Grey County and the counties bordering Lake Huron and in the Niagara Peninsula of southern Ontario deficiencies of 15 to 70% were reported. In extreme southwestern Ontario there was an excess of about 25% while along the upper St. Lawrence River and as far west as Belleville and Lindsay deficiencies of about 15% occurred. Along the northwestern shore of Lake Ontario moderate excesses of 5 to 25% occurred while in the region between Lake Simcoe, Lake Nipissing and Ottawa rainfall was generally 15 to 30% above normal although excesses of 100% were reported locally at Bancroft and Pembroke.

In Quebec excesses of 50 to 100% were reported about the headwaters of the St. Maurice River and in the lower Gatineau and Coulonge River valleys. Elsewhere in Quebec from the Saguenay River to the Ontario-Quebec boundary and southward to the International Border precipitation was deficient. About the headwaters of the Gatineau and Ottawa River valleys deficiencies of about 45% on the average occurred while along the lower Ottawa and upper and middle St. Lawrence Rivers deficiencies were 10 to 50% and 30% generally. In the Lake St. John district rainfall was generally about 10% below normal although some small excesses were locally reported. In the Gaspé Peninsula and along the north shore of the Gulf of St. Lawrence normal to nearly three times the normal rainfall was reported.

In northern New Brunswick precipitation was 50 to 90% above normal but in the central and southern sections of the province deficiencies of 10 to 60% were reported. Exceptions were St. John where normal rainfall was reported and at Sussex where a small excess occurred. In southwestern Nova Scotia the departures from normal were quite small, being about 5% above normal in the Annapolis Valley and 5% below normal along the southern shore of the Basin of Minas. At Yarmouth an excess of about 60% occurred. In eastern Nova Scotia moderate excesses of 25 to 30% were reported while on Prince Edward Island there were deficiencies of about 30%.

In western and northern sections of Newfoundland precipitation was considerably above normal but deficiencies of of 20 to 50% were reported in the southeastern section of the country.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month.
